## 1 Semantic Web

### 1.1 Introductory

The first of these is the classic general introduction to the concept of the semantic web:

Tim Berners-Lee, James Hendler and Ora Lassila,  
**The Semantic Web**,  
Scientific American, May 2001

Aaron Swartz,  
**The Semantic Web in Breadth**,

## 8 Usability and Business Benefits

(Comments from Tom Bösser)

For a general overview on approaches and methods for user centered design and user testing many sources corresponding to all tastes exist. In the following we have attempted to give as brief and unbiased an introduction as possible, concentrating on proven and tested methods:

<http://www.vnet5.org>

The most relevant approach to model and assess information search by humans is in my view "information foraging". There is no widely tested method, but the concepts are profound and offer the possibility to adapt methods in a lean fashion.

Pirolli, P. and Card, S. K.,  
Information Foraging,  
Psychological Review 106(4): 643-675, 1999  
<http://www2.parc.com/istl/groups/uir/publications/author/Pirolli.html>

To document, model and quantify user procedures in a business context the most appropriate tool is probably ARIS, but there are other candidates. There is a wide range of texts which introduce the matter, most people refer to the writings of A.W.Scheer, but in English the following is a popular text:

Davis, Rob,  
**Business Process Modelling with ARIS.**  
Springer Verlag, 2001  
<http://www.amazon.com/exec/obidos/tg/detail/-/1852334347/103-0841236-1217440?v=glance>

I would like to be able to refer to a text which introduces to the measurement of information quality and information value, but there is none which I can recommend as a sole source, and without critical comments. Hopefully I will be able to provide more in the coming months
